BUILDING
INNOVATION 2019

National Institute of
BUILDING SCIENCES
CONFERENCE & EXPO

Goals & Topics of Discussion

- Why are present-day buildings performing similarly to early 1900's buildings?
 - Energy code and how it evolved to allow this to happen
 - High-rise commercial building glass exteriors
- Do we *have* to design with mostly glass assemblies?
 - Case study showing differences between recladding in fully-glazed systems vs. partially-glazed systems (40% WWR)

BUILDING
INNOVATION 2019

Fast Facts on Energy Use

Facts About Energy Use in Commercial and Industrial Facilities

- > Combined number of **commercial buildings (4.8 million)** and industrial facilities (350,000) in the United States: **over 5 million**¹
- > Combined annual energy costs for U.S. commercial buildings (\$107.9 billion) and industrial facilities (\$94.4 billion): **\$202.3 billion**²
- > Portion of energy in buildings used inefficiently or unnecessarily: **30 percent**³
- > Combined percentage of U.S. greenhouse gas emissions generated by commercial buildings (17 percent) and industrial facilities (28 percent): **45 percent**⁴
- > Percentage of energy use reduction targeted by the ENERGY STAR Challenge: **10 percent**⁵
- > Amount of money that would be saved if the energy efficiency of commercial and industrial buildings improved by 10 percent: **\$20 billion**⁶
- > Amount of greenhouse gas emissions that would be reduced if the energy efficiency of commercial and industrial buildings improved by 10 percent: **equal to about 30 million vehicles**⁷
- > Number of registered automobiles in Illinois, New York, Ohio, and Texas combined: **about 30 million**⁸

INNOVATION 2019**

National Institute of
BUILDING SCIENCES

CONFERENCE & EXPO

Benchmarking

Less than 1% of buildings in Chicago are larger than 50,000 ft², but they represent 22% of the total energy used by all buildings

Building Energy Use and Sector Breakdown

Chicago Building Energy Use			
	All Chicago buildings	Large Buildings (>50,000 ft ²)	
		Amt.	%
Total Buildings	452,000 buildings	3,500 buildings	0.7%
Total Energy Use (million kBtu)	223,000 MkBtu	43,100 MkBtu	22%
Total Electricity (million kWh)	20,800 MkWh	6,600 MkWh	35%

If all buildings larger than 50,000ft² reduced energy use by 5%, it would amount to annual savings of ~2 trillion Btu energy, ~\$40 million, & ~50,000 cars' worth of CO₂e

Note: (*) With gas or electricity service. 488,000 total buildings

CONFERENCE & EXPO

Benchmarking

Per Ordinance:

"Benchmark" means to track and input a building's energy consumption data and other relevant building information for twelve consecutive months, as required by the benchmarking tool, to quantify the building's energy use.

BUILDING

Quotes

"This ordinance will help to capture the information to enable better informed real estate decisions and unlock the market for energy efficiency. We believe that this ordinance addresses key business and policy priorities in our sector, including saving money, creating local jobs, protecting our health, and promot[ing] Chicago's position as a leading sustainable city to attract new business and succeed in the global market place."

— Commercial and Residential Real Estate Management Executive

Welcome and Introduction:

In September 2013, Mayor Emanuel and Chicago's City Council adopted a building energy benchmarking ordinance to raise awareness of energy performance through information and transparency, with the goal of unlocking energy and cost savings opportunities for businesses and residents.

The ordinance calls on existing municipal, commercial, and residential buildings larger than 50,000 square feet to track whole-building energy use, report to the City annually, and verify data accuracy every three years. The law covers less than 1% of Chicago's buildings, which together account for ~20% of total energy used by all buildings.

Improving energy efficiency is a key element of [Sustainable Chicago 2015](#), Mayor Emanuel's 3-year action agenda to make Chicago more livable, competitive, and sustainable.

The full text of the [ordinance can be found here](#).

The first compliance deadline is June 1, 2014 for municipal and commercial buildings larger than 250,000 square feet. Benchmarking, verification, and reporting deadlines for additional buildings covered by the ordinance will phase-in through 2016.

Please check this website for updates on the ordinance, compliance guidance, support, and training opportunities.

Chicago Energy Benchmarking - 2016 Data Reported in 2017

Based on [Chicago Energy Benchmarking](#)

The Chicago Building Energy Use Benchmarking Ordinance calls on existing municipal, commercial, and residential buildings larger than 50,000 square feet to track whole building energy use, report to the City annually, and make data publicly available through the City's Building Energy Use Benchmarking Ordinance.

CONFERENCE & EXPO

Energy Code: History of ASHRAE

- Energy crisis of 1973: ASHRAE president Robert R. Kirkwood “Optimum Energy Utilization Through Technology”
- February 1974: ASHRAE winter meeting in LA, National Bureau of Standards presented the idea of a building energy standard (Standard 90P) to 200 ASHRAE participants, and ASHRAE took over
- January 14, 1975: ASHRAE Standard 90-1975 issued
- ASHRAE 2004 edition: Appendix G (Energy Modeling) was added

IECC OR ASHRAE 90.1

ANSI/ASHRAE/IES Standard 90.1-2013
(Supersedes ANSI/ASHRAE/IES Standard 90.1-2010)
Includes ANSI/ASHRAE/IES Addenda listed in Appendix F

Energy Standard for Buildings Except Low-Rise Residential Buildings (I-P Edition)

See Appendix F for approval dates by the ASHRAE Standards Committee, the ASHRAE Board of Directors, the IES Board of Directors, and the American National Standards Institute.

This standard is under continuous maintenance by a Standing Standard Project Committee (SSPC) for which the Standards Committee has established a documented program for regular publication of addenda or revisions, including procedures for timely, documented, consensus action on requests for change to any part of the standard. The change submittal form, instructions, and deadlines may be obtained in electronic form from the ASHRAE website (www.ashrae.org) or in paper form from the Manager of Standards. The latest edition of an ASHRAE Standard may be purchased from the ASHRAE Web site (www.ashrae.org) or from ASHRAE Customer Service, 1791 Tullie Circle, NE, Atlanta, GA 30329-2305. E-mail: orders@ashrae.org. Fax: 678-539-2129. Telephone: 404-636-8400 (worldwide), or toll free 1-800-527-4723 (for orders in US and Canada). For reprint permission, go to www.ashrae.org/permissions.

Prescriptive envelope requirements by climate zone

Table 5.5-5 Building Envelope Requirements for Climate Zone 5 (A,B,C)*

Opaque Elements	Nonresidential			Residential			Semiheated		
	Assembly Maximum	Insulation Min. R-Value		Assembly Maximum	Insulation Min. R-Value		Assembly Maximum	Insulation Min. R-Value	
Fenestration	Assembly Max. U	Assembly Max. SHGC	Assembly Min. VT/SHGC	Assembly Max. U	Assembly Max. SHGC	Assembly Min. VT/SHGC	Assembly Max. U	Assembly Max. SHGC	Assembly Min. VT/SHGC
Vertical Fenestration, 0%-40% of Wall	(for all frame types)			(for all frame types)			(for all frame types)		
Nonmetal framing, all	U-0.32			U-0.32			U-0.45		
Metal framing, fixed	U-0.42			U-0.42			U-0.62		
Metal framing, operable	U-0.50	SHGC-0.40	1.10	U-0.50	SHGC-0.40	1.10	U-0.70	NR	NR
Metal framing, entrance door	U-0.77			U-0.68			U-0.77		
Skylight, 0%-3% of Roof									
All types	U-0.50	SHGC-0.40	NR	U-0.50	SHGC-0.40	NR	U-0.98	NR	NR

* The following definitions apply: c.i. = continuous insulation (see Section 3.2), FC = filled cavity (see Section A2.3.2.5), Ls = liner system (see Section A2.3.2.4), NR = no (insulation) requirement.

a. When using the R-value compliance method for metal building roofs, a thermal spacer block is required (see Section A2.3.2).

b. Exception to Section 5.5.3.2 applies for mass walls above grade.

Energy Code - Performance

Performance path (energy modeling):

- Different Purposes: Design assistance, general energy savings, code/LEED Compliance
- Test Energy Conservations Measures (ECMs): envelope, insulation, glazing, HVAC, controls

BUILDING
INNOVATION 2019

National Institute of
BUILDING SCIENCES
CONFERENCE & EXPO

Energy Code - Performance

Most common reasons to perform an energy model rather than use the prescriptive path:

- High WWR
IECC requires $\leq 30\%$ WWR
ASHRAE 90.1 requires $\leq 40\%$ WWR
- 'Transparent' single pane glass
> U-value requirements
- Tradeoffs (envelope, lighting, HVAC)

Baseline eQuest model

U-0.42
40% WWR
Code HVAC

Proposed Design eQuest model

U-1.0
100% WWR

BUILDING
INNOVATION 2019

National Institute of
BUILDING SCIENCES
CONFERENCE & EXPO

High-Rise Commercial Repositioning

- Curtain wall and window wall service life
 - Open joints at split-mullion and stack joints
 - Deteriorated seals at sills/jambs
 - Deteriorated sealants and gaskets
 - Deteriorated IGU seals and spacer bars
- Older glazing technology vs. present-day design loads

TYPICAL METAL PANEL | CONSTRUCTION PROCESS

- STEP 1 | Island's aluminum and steel stud framing system assembled.
- STEP 2 | Sheathing + waterproofing membrane application.
- STEP 3 | Perimeter frame extrusions and visual gasket applied.
- STEP 4 | Horizontal and vertical sub-frame grills installed.
- STEP 5 | Semi-rigid insulation and stickpins are applied and waterproofed.
- STEP 6 | Window gaskets, structural silicone and glazing installed.
- STEP 7 | Aluminum composite metal panels and clips installed.
- STEP 8 | Panel is water-sealed, cleaned, checked for quality control, and is ready for shipment + erection.

CONFERENCE & EXPO

Case Study - Existing

- Data from Chicago Energy Benchmarking Ordinance shows **One South Wacker** at an **EUI of 49.2 kBtu/sf-yr**
- It's already doing pretty well (relatively), but why not be better? Improvements can be made to optimize for energy, as well as comfort, etc.

UNDERSTANDING DISCOMFORT

Glazing and Winter Comfort Tool

This tool displays the impact of glazing geometry and U-value on occupant thermal comfort during winter months. It shows when it is possible to eliminate perimeter heat in cases where the U-value is low and windows are small.

Email the [developers](#), visit our [github](#), and read the [license](#).

We've updated! See the [release notes](#), to learn about this tool's improved downdraft comfort model and interface updates.
