Our full line of wireless analog clocks can be set up quickly and easily. Pyramid uses the proven industry standard of using frequency-hopping technology to broadcast between 902 and 928MHz radio frequencies. This delivers a dependable wireless synchronized clock signal in any vertical market.

Each 13 inch Wireless Analog Wall Clock features easily viewable faces and years of maintenance-free service for a variety of environments. The clocks are ideal for facility renovation, retrofit design, and new construction applications. Since the clocks receive their radio time frequency from our TimeTrax Sync Transmitter, they will stay on time virtually anywhere throughout your facility.

With the central time source being captured from GPS, NTP and/or the facility's internal network, it makes for a universal system almost anywhere. Easy implementation with no FCC license required.
